

QUESTIONS

TO ASK YOUR DOCTOR

Invasive breast cancer treatment is not “one size fits all” – what is best for one person may not be right for another. You can take an active role by learning as much as possible about your breast cancer diagnosis and your available treatment options, including the success rates and side effects of each option, before deciding what is best for you.

You may want to ask your doctor the following questions:

What **type** of breast cancer do I have?

What **stage** is my breast cancer?

What are the **chances of cancer coming back** after surgery?

Is my **cancer hormone receptor-positive** or negative?

What is my **HER2 status**?

What **treatment options** would you suggest for me and why?

What are the **benefits and side effects** of each treatment option?

How long can I wait **before deciding** about treatment?
